ConnectView™
Web App for Use with
CTC Connect Wireless System

CTC CONNECT
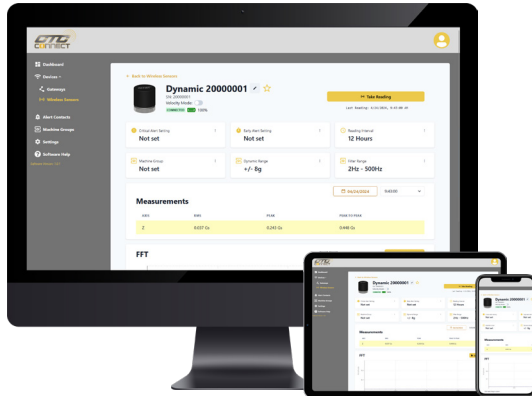

Product Features

Comes preloaded on the ConnectBridge™ Gateway (no additional download required)

Designed for integration with 3rd party vibration data analysis software.

When a WS200 or WS300 sensor battery dies, whatever configuration settings were applied in the web app will remain hard coded on that sensor when battery is replaced.

System agnostic web app runs on network connected gateways out of the box, and is accessible from any PC, laptop, tablet, or smartphone connected to the same network.

Sensor Configuration Options

Nickname

Favorite device

Set early and critical alert values

Change automatic reading interval (WS 200 & 300)

Create Machine Group & assign sensors

Set Dynamic Range (WS 200 & 300)

Set Sampling Frequency and Resolution (WS 200 & 300)

Switch between AC and DC output coupling (WS 200 & 300)

Data Viewing

Time Waveform graph (WS 200 & 300)

FFT graph (WS 200 & 300)

Historical readings

Battery Level

Connection Status / Last Check In

Historical Trending Data for vibration and temperature

Active alerts
