† Achievable battery life depends on environmental conditions, configuration options, and sensor use. CTC recommends replacing the battery every 4 years, regardless of remaining battery life reported by software, due to effects of battery degradation over time. If operating above 50 °C, replace the battery in half that time.

WS300 sensors provide raw dynamic vibration samples only. Sensors do not calculate/provide an FFT or other frequency analysis data, this must be calculated separately in software. Access360 Gateway devices automatically perform these calculations and make an FFT of the sensor data available, see the Access360 datasheet for more information.

ConnectSens™ Wireless Triaxial Dynamic Vibration Signal Capture Sensor with Temperature Output

Connectivity

Connectivity

CTC WS300 sensors broadcast readings over **Bluetooth®** Low Energy 5.2, which can be picked up by CTC ACCESS360 wireless gateways. Complete your data collection route from your desk when utilizing a WS300 with a gateway. Each gateway can be used with an unlimited number of CTC wireless sensors within range, and allow for 20 simultaneous connections. ACCESS360 gateways connect to your plant's network via an ethernet connection to request a reading on demand.

ConnectView™ Web App

CTC offers an easy to use web app that is included with the purchase of any ACCESS360 gateway. Key features include:

- The ability to configure dynamic ConnectSens™ Sensors
- Nickname sensors & assign sensors to machine groups
- Easily view and export data:
  - Dynamic sensor signal plot & FFT
- Set early warning and critical alert levels
- View battery life
- Web interface runs off of your local network - you own your data and control your security. This means no recurring data fees when utilizing your local network.

Our API also allows OEM customers to utilize their own software to communicate with CTC ConnectSens™ Wireless Sensors via a CTC ConnectBridge™ gateway.
